

GreenGrid AI

AI-Powered Energy Optimization Platform for Government & Public Sector Infrastructure

! PROBLEM

- > **Energy Waste:** 20-30% energy wasted in public buildings due to outdated HVAC and poor scheduling
- > **Sustainability Mandates:** Governments struggling to meet net-zero targets without actionable data
- > **Budget Constraints:** Rising energy costs with limited technical expertise

Existing Alternatives:

- > Manual audits (expensive, static)
- > Basic BMS (no prediction)
- > Hardware implementation

* SOLUTION

- > **Predictive Analytics:** ML forecasting based on weather, occupancy & trends
- > **Optimization Engine:** AI-driven HVAC & load balancing
- > **Sustainability Dashboard:** Real-time carbon tracking & compliance reporting
- > **Renewable Integration:** Solar/wind forecasting & battery management

KEY METRICS

- > Energy Savings (%)
- > Cost Reduction (€)
- > Carbon Reduction (CO2)
- > Facilities Onboarded
- > Prediction Accuracy

@ UNIQUE VALUE PROPOSITION

"Transform public buildings into smart, sustainable assets. Deliver 10-15% energy savings through predictive intelligence."

High-Level Concept:

"Nested thermostat intelligence, scaled for government infrastructure"

- > Purpose-built for public sector compliance
- > No hardware required
- > Transparent & explainable AI
- > ROI in 9-18 months

^ UNFAIR ADVANTAGE

- > **Proprietary Dataset:** Aggregated government energy data with network effects
- > **Domain Expertise:** Public procurement & compliance knowledge
- > **Strategic Partnerships:** Utility & smart meter integrations
- > **Regulatory Head Start:** Built for ESG requirements

= CHANNELS

- > Direct government sales team
- > Smart city conferences
- > Energy consultant partnerships
- > 90-day free pilot programs
- > Published case studies

+ CUSTOMER SEGMENTS

PRIMARY:

- > Municipal & local governments
- > Public school districts
- > Public hospitals

SECONDARY:

- > State/provincial agencies
- > University systems

EARLY ADOPTERS:

- > Cities with climate emergencies
- > Smart city initiatives

€ COST STRUCTURE

Fixed Costs:

- > Cloud infrastructure (AWS/Azure Gov)
- > Engineering team (ML, data science)
- > Security & compliance certs

Variable Costs:

- > Customer success & support
- > Sales commissions
- > Marketing & conferences

Cost Split:

- > Engineering: 40%
- > Sales/Marketing: 25%
- > Infrastructure: 15%
- > Support: 12%
- > G&A: 8%

€ REVENUE STREAMS

Primary: SaaS Subscription (Tiered)

Starter

Single facility
€800-2,000/mo

Professional

Multi-facility
€4,000-15,000/mo

Governmental

City/Council-wide
€50K-500K/yr

Secondary Revenue:

- > Implementation services
- > Training & certification
- > Premium support & Service Level Agreements

Advantages:

- > Recurring, predictable revenue
- > Multi-year govt contracts (3-5 yrs)
- > Expansion as customers grow
